

September 2009 saw the launch of ADBA (the Anaerobic Digestion & Biogas Association) at the UK's Dairy Event show. (see; www.adbiogas.co.uk)

As one of ADBA's founder members, Landia will add its 25 years biogas experience to the group, bringing advice on technological advances made (and pitfalls to avoid), that will allow engineering best practices to be established in the rapidly expanding UK biogas market.

ADBA's Chief Executive, Lord Redesdale (former Liberal Democrat spokesperson on Energy and Agriculture (2000-2008) and serving Vice Chairman of the All Party Climate Change Group) commented "Anaerobic digestion and biogas are vital to Britain's energy needs. AD is the renewable technology that will do most to fight greenhouse gas emission from fossil fuels and providing good economic returns that are built on proven technology."
