

Landia's GasMix helping to tackle London's food waste

June 2017

Landia's GasMix system is proving instrumental in tackling 75,000 tonnes of London's food waste each year at Bio Collectors' AD facility – the only gas to grid food waste operation in Greater London. Bio Collectors has contracts with the likes of Sainsbury's and Pizza Hut, and when choosing the GasMix system for the Surry plant, Managing Director, Paul Killoughery, said: "Very early on we decided that we definitely didn't want mixers inside the tank that we couldn't get to. With Landia's externally mounted GasMix system we have equipment that is easily serviceable and repairable from the outside. Although as it happens, we've had no major problems whatsoever."

"Good mixing has also produced top quality digestate," adds Paul. "It is high in NPK and very popular with arable farmers who see increased yields. Our PAS 110 test for residual biogas conclusively shows that our mixing system is working to an extremely high standard. It is a major benefit to the whole process."
