

Pump's Knives at the ready!

August 2017

For trouble free pumping of straw-laden liquid manure, Landia's Chopper Pump has helped farmers all over the world - including right here at Stoneleigh Park.

Designed with rotating knives at the inlet to continuously reduce particles and stop large solids from entering the pump. Landia's Chopper Pump successfully handles slurry at Rugby Farmers Mart (RFM) - one of the UK's leading livestock markets - based at the National Agricultural Centre.

Supplied by Midland Slurry Systems (also at Grassland & Muck), the Landia Chopper Pump operates at RFM for over 100 hours per week in high season, with no blockages.
