

# Landia Wins New Wastewater Mixer and Pump Contract in Emerging Jordan City

October, 2018

**The engineers in Jordan wanted to optimize the entire mixing operation and see a proven history of longevity and reliability in the equipment supplied.**

Landia Flowmakers with a Lifetime Propeller Guarantee - have been supplied by Landia in North Aqaba - a city in the kingdom of Jordan that is experiencing a rapid growth due to extensive construction of new hotels and resorts on its way to becoming an important tourist destination.

Situated in the far southwest of the country, close to the Gulf of Aqaba and the Red Sea, the expanding Wastewater treatment Plant will also see the installation of long-lasting submersible mixers and recirculation pumps from Landia.

Working in close conjunction with its local partner, Modern Industrial Services, Landia has provided a total of 23 units - actually decreasing the number of mixers in the plant's anoxic tanks from sixteen to eight - thus significantly reducing installation and ongoing operational costs for many years to come. This saving was a direct result of Landia's detailed discussions with engineers in Jordan, who wanted to optimize the entire mixing operation and see a proven history of longevity and reliability in the equipment supplied.

Torkild Maagaard, Export Sales Director at Landia, commented: "We are very proud to be working in Jordan, where engineers have a firm belief and vision in creating a facility that is designed and built with robust, efficient equipment that will stand the test of time. Offering a lifetime guarantee on our stainless-steel propellers shows that we can stand by the

proven worldwide track record of our pumps and mixers".

Expansion of the Aqaba facility, featuring a new 12,000 m<sup>3</sup>/day mechanical wastewater treatment plant, also includes systems for reclaimed urban and agricultural water - as well as a new flow-splitter to separate influent from the mechanical plant and natural processes.

Landia was founded in 1933, and now it has 80 years' experience in producing customized products of high quality. Today, Landia is one of the world's leading manufacturers of Chopper Pumps, Propeller Mixers, Aeration Systems, and Advanced Process Equipment. Landia supplies pumping and mixing solutions to different industries, with the most important ones being agriculture, wastewater, biogas plants, and the fish industry. Its headquarters are located in Lem, Denmark. Today, Landia has subsidiaries in England, Germany, Norway and the US, and a sales office in China. In addition, Landia products are sold in 45 countries worldwide.
